

# fontawesome: high quality web icons

The **fontawesome** package grants access to 634 web-related icons provided by the included *Font Awesome* free font, designed by Dave Gandy and released under the open SIL Open Font License (available at <http://scripts.sil.org/OFL>). See <http://www.fontawesome.io> for more details about the font itself.

This package works both with Xe(La)TeX and Lua(La)TeX (using *fontspec* to load the included original otf font), as well as pdf(La)TeX (using an included type1 conversion and character mapping of the font).

Once the package is loaded, icons can be accessed through the general `\faicon` command, which takes as argument the name of the desired icon, or through direct commands specific to each icon. The full list of icon designs, names and direct commands is showcased in the manual.
